Updates in Breast Health for Community Providers
Embassy Suites by Hilton Albuquerque Hotel & Spa
Albuquerque, NM
April 28, 2018
This program will review breast care topics of interest presented at a national level as well as commonly encountered questions within the setting of the primary care provider visit. We will highlight an insider's view of breast cancer prevention with top breast cancer researcher, Dr. Alison Stopeck. Pertinent aspects of breast radiology, including the association of breast density with cancer risk, and the latest updates in 3D mammography, will be summarized.

A review of wider panel genetic testing, including a discussion of the "variant of uncertain significance" will be offered. The rationale for multidisciplinary decision-making will be discussed via a paired lecture and mock tumor board. The unique aspects of lobular type breast cancer, case discussions of common presenting conditions, and a robust review of survivorship basics for the PCP, will round out the day.

By the end of the course, participants will be able to:
- Discuss the relationship between breast density and breast cancer risk.
- Discriminate the differences in 3D vs. 2D mammography.
- Triage common breast disorders.
- Describe management issues in lobular type breast cancer.
- Discuss new research avenues for prevention of breast cancer.
- Enhance understanding of wider panel genetic testing and multidisciplinary care decision-making.
- Incorporate survivorship principles into the practice.
